sulphur content to within acceptable limits.

(iii) Already, LSHS is on OGL and this freedom would be extended for non-traditional fuels like condensate and orimulsion subject to actual user condition.

(iv) However, there would be no obligation for Oil PSUs to give fresh linkages for any new projects, except Naphtha based projects within a ceiling of 12000 MW and projects based on other fuels for which linkages have already been issued.

The modified policy enabbles State Governments to promote power plants on fuels other than Naphtha without any quantitative rstriction, Additional requirement of naphtha has also to be accommodated within the revised policy.
